

Inspection sticker notice

Only personnel who are specially trained and verifiably authorised (e.g. by the manufacturer) to do so may install the lift. The system must first pass a safety inspection as carried out by the installation personnel before it can be commissioned for use. The inspection must be carried out in accordance with the "F-Sichb" (1 and 3 or 5) test log sheets. After determining and documenting (filling in the test log) the safe and reliable condition of the lift, the inspection sticker provided must be attached to the outside of the lift according to the drawing (SecLabel.dwg).

Subsequent regular inspections are required, based on owner/operator assessment, but no less than once per year.

Furthermore, all other national laws, standards and regulations are to be observed as well.
